

Blasting material barrel and suction kit for ST-555 wet blasting kit

The choice of perfection

Ideal for cleaning machines, systems, facades and masonry:

- Blasting material storage in the barrel
- Mobile work with heavy blasting material
- Protection from rain and moisture
- Easy connection
- Quick installation using a template

Blasting break: The ST-555 wet blasting kit can be safely placed on the lid of the barrel with the gun connected during work breaks.

Blasting material barrel and suction kit

- Robust stainless steel design of the intake kit in arch shape.
- Includes ball valve for air-flow regulation
- Easy installation on existing barrels, thanks to the included drilling template.
- Ready for use in no time: The suction hose is simply pushed on.
Incl. nipple: R+M No. 040 005 665
- For blasting material up to a grain size of 1.2 mm.
- Mobile working thanks to wheels
- Simply place it away: The ST-555 wet blasting kit can be safely placed and stored on the lid of the barrel.
