Functional principle of a chemical injector

High pressure phase

Low pressure phase

The operation of the injector depends on:

- 1 The nozzle type must be chosen in dependence on the output of the high pressure cleaner.
- 2 The difference of pressure allows addition of chemical products occurred by special effect of "venturi" nozzle. This effect is given when the water also rinses through the low pressure nozzle. This has a bigger orifice than the high pressure nozzle and is mounted on the spray lance (e. g. at a double lance).
- 3 Length of the high pressure hose (should not be longer than 20 m).
- 4 Internal diameter of the high pressure hose (the longer the hose the bigger should be its internal diameter). Hose extensions injure output of the injector.

Suttner chemical injectors

ST-64 upstream chemical injectors

Injector with shiftable and disengageable chemical dosing. For suction of chemicals in the water inlet of the pump. Mixtures of chemicals/water can be applied by high pressure. Please use the backflow preventer (R+M Nr. 734 10 or 734 20). Hose tail 6 mm. Max. 10 bar / 90 °C

R+M Nr.			
200 064 500	1/2" M	1/2" F	5 – 15 l/min
200 064 510	1/2" M	1/2" F	15 – 30 l/min

Suttner chemical suction sets

Suction sets with suction hose 1,500 mm, suction filters ST-31 and chemical-resistant plastic tube 320 mm. The tube keeps the suction filter at the deepest point.
